

# PATCHETT MANURE AUGER

This heavy duty manure auger has been in use for over 25 years and Patchetts have installed it on farms throughout the UK. These are the reasons why it has proved successful :-

- Reliability of operation.
- 4 KW motor and 16m maximum auger run reduce the possibility of stalling.
- Steel trough and screw are hot dip galvanized after manufacture for a long life.
- No universal joint and no contact between screw and trough, make for easy running.
- The large diameter of 30 cm reduces clogging.

The conveyor is supplied in 3 types of 2m long sections :-

Drive

Tail or final section

Extension section (middle)

An inclined conveyor is supplied with an adjustable stand.

See our data sheet 82 for dimensions.
